SUN060 – GAS TANK END PANEL PACKING SET

The gas tank end panels originally had felt packing to reduce noise and provide a positive fit. This set is reproduced to the same dimensions and uses the same type material as that used originally. The photo below was taken of an original TC tank which clearly shows the area of placement for the packing. The only difference is that this set has easy to remove self adhesive for your convenience. Peel, stick and you are done. Thank you for your purchase. Safety Fast!
